

CARDIAC CARE PROGRAM

Covering various disease processes including Congestive Heart Failure (CHF), Coronary Artery Bypass Grafting (CABG), Heart Attack, Stroke, High Blood Pressure

ASSESSMENT

 A Registered Nurse will complete a full body assessment with a focus on the patients diet, weight and medication compliance. If Physical Therapy is ordered, they will focus on increasing a patients strength, AROM and creating a Home Exercise Program delivering continued benefit for the patient even after discharge from Home Health Services.

HOME SAFETY EVALUATION AND SOC ASSESSMENT

Acclaim home cares clinical team will perform daily nursing visits to assess the patients status and monitor vital signs on newly diagnosed cardiac patients; or patients who have experienced a recent exacerbation of their disease process until their condition stabilizes with no heightened risks in the home setting. This will prevent readmissions or ER visits for common cardiac symptoms that can be addressed at home. Patients will be educated on their specific disease process, management, interventions, and complications necessitating medical attention. Effective communication will be established with the patients' PCP and/or Cardiologist that will allow the clinical team to relay vital information and take immediate action as ordered by their physician. If ordered, physical therapy will perform a secondary home safety evaluation to ensure a safe home environment, provide muscle strengthening exercises to improve mobility and provide fall and injury prevention techniques to enable patient to return to prior levels of function. A multidisciplinary approach to patient care will improve patients' quality of life and enable them to manage their disease processes within their home setting.

SKILLED TREATMENT

-  INFUSION THERAPY AS ORDERED
-  PT/INR CHECKS AS ORDERED
-  PHYSICAL THERAPY AS ORDERED
-  ZOE FLUID STATUS CHECK AS ORDERED

MONITORING/STEP-BY-STEP GUIDELINE APPROACH

All listed skilled treatments will be provided per physician ordered care in the home setting. PT/INR testing will be completed by our nurses to provide accurate and immediate results for the patients physicians. Our STEP BY STEP HF, CHF, CABG patient guides deliver critical post-acute content, decision support and patient education solutions. It will empower our patients in managing their own health and significantly improve patient care outcomes in their home health care. The ZOE Fluid Status Monitor will provide a quick and easy method for determining whether individuals are experiencing fluid congestion or dehydration. The measurement can be used as an 'early warning' monitor and initiate a more timely intervention.

CARE PRODUCTS

-  BLOOD PRESSURE MONITOR
-  WEIGHING SCALE
-  STEP BY STEP GUIDE
-  PILL BOX ORGANIZER

DIAGNOSIS SPECIFIC CARE PACKAGES

Our disease specific care packages will provide necessary patient supplies to aide in the continued care of our patients during treatment. Cardiac patients will be provided these items to maintain patient goals and provide continued education and self management tools. (Blood Pressure Monitor/Weighing Scale will be provided as needed per patient)
