

WHY HOME HEALTH IS A BETTER FIRST OPTION INSTEAD OF OUTPATIENT THERAPY?

- 🧑🏻‍🤝‍🧑🏻 As the patient begins their recovery at home, immediate range of motion exercises can begin per physician protocol if CPM (Continuous Passive Motion) devices are not utilized.
- 🧑🏻‍🤝‍🧑🏻 A Registered Nurse will always open and assess patient status for additional services needed as well as ongoing monitoring of vital signs, medication management and signs & symptoms of infection to **avoid unnecessary rehospitalizations which increases Cost of Care.**
- 🧑🏻‍🤝‍🧑🏻 Home Health aides can be ordered to assist patients with bathing/showering and additional personal care activities.
- 🧑🏻‍🤝‍🧑🏻 Therapy is performed in the comfort of a patient's home, avoiding unnecessary travel to outpatient therapy centers, until the patient becomes **INDEPENDENT (No Longer Homebound)** and is then able to **finalize additional therapy treatments at the physicians Preferred Outpatient Therapy Center.**
- 🧑🏻‍🤝‍🧑🏻 All supplies necessary for **Wound Care Management** are provided and covered under Home Health services by Medicare.
- 🧑🏻‍🤝‍🧑🏻 Patients will receive an Individualized Plan of Care & Treatment as well as one-on-one therapy treatment while an Outpatient therapy center treats multiple patients at a time during treatment services.
- 🧑🏻‍🤝‍🧑🏻 Home Health services are **100% covered by Medicare**; there are **no out-of-pocket expenses or co-payments involved with homecare services as there are with Outpatient Therapy services.**
- 🧑🏻‍🤝‍🧑🏻 The ordering/following physicians are able to bill Medicare for all Care Plan Oversight services involving **reviewing and signing patients Plan of Cares, Certifications or Recertifications.**
